

A MONTE CARLO METHOD FOR SIMULATING THE NEUTRAL DENSITY PROFILE IN AN ECR ION SOURCE

Supervisor: Taneli Kalvas

Abstract

Lorem ipsum

1 Introduction

2 Theoretical background

2.1 Plasma processes

2.1.1 Electron ionization

2.1.2 Charge exchange

2.1.3 Recombination

2.2 Ion confinement

2.3 Knudsen's cosine law

2.4 Thermal accommodation

3 Numerical methods and tools

3.1 Monte Carlo test particle simulation

3.2 Monte Carlo collisions

3.3 Decay channel sampling

3.4 Software packages

4 Results

4.1 Convergence test

4.2 Stationary density distribution

4.3 Time dependent density distribution
